WORK EXPERIENCE

Flutter Mobile Developer, Masarat For IT and Financial Services **Apr 2026 - Present**

- Developed secure and responsive mobile banking applications for iOS and Android platforms.
- Implemented core financial modules and secure transaction flows with a strict focus on data integrity.
- Translated business requirements into intuitive user interfaces, integrating seamlessly with backend financial services.

Back-End Developer (Laravel), Adim Tech **Feb 2025 - Feb 2026**

- Built backend services and APIs for Zajel, a multi-store marketplace platform.
- Led the tech team, managing tasks and ensuring timely delivery.
- Developed core modules (financial operations, order management) with focus on stability and data integrity.
- Translated business requirements into efficient backend solutions integrated with frontend systems.

Database Administrator (SQL Server) ,Becom Fin-Tech **Oct 2023 - Dec 2025**

- Ensured automated database backups and implemented recovery strategies.
- Designed, implemented, and maintained efficient indexes to optimize query performance.
- Provided technical support to customers, addressing their database-related concerns.
- Wrote detailed reports and crafted complex queries tailored to business needs.

EDUCATION

Bachelor's Degree in Software Engineering. **Dec 2019 - Dec 2024**

College of Computer Technology - Tripoli

- Software Development: Principles of building scalable and robust software applications.
- Algorithms and Data Structures: Efficient algorithm design and data organization techniques.
- Software Project Management: Planning and executing software projects with a focus on effective coordination, timely delivery, and continuous improvement.

PROJECTS

Smart Timetable Management System for College of Computer Technology - Tripoli

The Smart Timetable Management System automates the scheduling process, optimizing room assignments, instructor availability, and lectures distribution. It features conflict-free scheduling and a drag-and-drop interface for easy timetable adjustments. Using a genetic algorithm for optimization, the system enhances operational efficiency and user experience.

Tech Stack: Laravel (PHP) | Angular | Ionic (mobile app) | SQL Server | Genetic Algorithms

Zoon Order Delivery Management System

Zoon Order Delivery Management System streamlines the dispatching, tracking, and fulfillment process, optimizing logistics for delivery operations. Built for high performance and operational stability, the platform successfully processed over 1,000 production orders within its first month of launch. The system has since evolved, successfully launching as a scalable, multi-store platform to efficiently manage complex delivery networks across multiple vendors or locations.

Tech Stack: Laravel (PHP) | Angular | MySQL
